ABSTRACT

The study investigated the number: experience: qualifications: other variables (age, salary, and employment levels): and attrition of special education professional personnel in the seachers of mentally handicapped occurred in 1976-77, followed by a drop and leveling of employment in the succeeding 2 years: that over a period of 5 years, there was a permanent or temporary loss of about 50% of the 1973-74 personnel in several categories: and that all beginning teachers employed in 1978-79 for special education assignments had provisional teaching certificates. Tables with statistical data make up more than half of the document. (SBH)

CERTIFICATION, EMPLOYMENT AND ATTRITION OF SPECIAL EDUCATION
PROFESSIONAL PERSONNEL IN MICHIGAN

BY

Dr. Gary R. Smith College of Education Wayne State University Detroit, Michigan

September 1, 1979

"PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."

This report was prepared at the request of the College and University Task Force on Special Education Delivery Systems and the Special Education Services of Michigan Department of Education. However, the author's conclusions are not necessarily those of the Committee, the Michigan Department of Education or any of its Divisions.

At the request of the College and University Delivery System
Task Force, the writer submitted a proposal to conduct a study of
Special Education professional personnel employed in Michigan
Public Schools. The following questions or tasks were posed:

- How many beginning professional personnel (zero years teaching experience) were newly employed in Special Education assignments in Michigan Public Schools in the 1978-79 school year?
- 2. How many experienced professional personnel (1+ years teaching experience) were newly employed in Special Education assignments in 1878-79?
- 3. How many Special Education professional personnel who were employed in 1977-78 returned to Special Education assignments in/1978-79?
- 4. For each disability category, what were the academic degrees and types of certificates held by persons identified in items 1 and 2 above?
  - For those Special Education professional personnel employed in 1977-78, provide descriptive summaries for each disability category using the following variables:
    - a. age distribution
    - b. salary distribution
    - c. employment levels

- d. highest degree achieved
- e. type of certificate
- 6. For each disability category, select the professional personnel employed in 1973-74 and determine the cumulative attrition (loss of professionals for each year through 1978-79).

#### Procedures:

For information regarding employment, the researcher used computer tape copies of the Michigan Professional Personnel Register for the school years 1973-74, 1974-75, 1975-76, 1976-77, 1977-78, 1978-79. These tapes were provided by the Teacher Preparation and Professional Development Division, Michigan Department of Education.\* The Register includes descriptive information about the professional personnel employed in Michigan Public Schools in the following Special Education assignments: mentally handicapped, speech correction, orthopedically handicapped, school social worker, emotionally disturbed, psychologist, homebound, teagher counselor for physically handicapped, education of the blind, education of the deaf, teacher of trainable, consultant for mentally handicapped, learning disabled, occupational therapy.

In dealing with the question of attrition, the researcher used the social security number of each person to determine whether or not he/she returned to a Special Education assignment in Michigan Public Schools.

Although the raw data were provided by the Division, the writer is responsible for the analysis and interpretation of that data.

For information regarding certification, the researcher used computer tape copies of the Teacher Certification Master File, which were provided by the Teacher Preparation and Professional Development Division, Michigan Department of Education. This file indicates that endorsements for each certified teacher as well as the institution and year when the endorsements were recommended.

The Michigan Department of Education customarily counts the number of provisional certificates and endorsements issued during a fiscal year, e.g., July 1, 1978 through June 30, 1979. However, it takes time to secure, verify, and process the certificate recommendations from each teacher training institution. Since all of the teachers graduating in June 1979 would not be entered into the certification master file until September 1979, the researcher elected to use the calendar year for the count of provisional certificates and endorsements issued.

FORTRAN and STDS programs were used with the conventional statistical programs to collect and analyze the data in order to answer the preceding questions.

## Results:

#### **EMPLOYMENT**

Table 1 shows the total number of professional personnel who had either primary or secondary assignments in Special Education each year from 1973-74 through 1978-79. The table shows the number of persons in each category of Special Education, while the number in parentheses shows the annual percent change in

<sup>\*</sup>In this report the term "teacher" is often used to designate professional personnel who are not classroom teachers in the conventional use of that term, e.g. school psychologist, social worker.

number of persons in that category. For example, there were 2,245 teachers of mentally impaired (SA) pupils in 1973-74, and that number increased in 1974-75 to 2,314 teachers, which represented a 3% increase. The total number of teachers in this category has increased each year, with the largest increase occurring in 1976-77 when 2,898 teachers were employed representing an 18% increase over the preceding year. Similar interpretations may be obtained for each row category in Table 1.

Newly employed: Table 2 shows the number of newly employed professional personnel for each category from 1974-75/through 1978-79. There is variation among the categories when peak employment occurred and the extent of subsequent employment. For example, the peak employment of new teachers of mentally handicapped (SA) occurred in 1976-77, followed by a drop and leveling of apployment in the succeeding two years. On the other hand, employment of new teachers for learning disabled (SM) peaked in 1975-76 and has continued to increase each year after the drop in 1976-77.

Table 3 provides descriptive statistics for employment of beginning professional personnel (zero years teaching experience) in each category for the 1978-79 school year. Table 4 contains descriptive statistics of newly employed professionals who had previous teaching experience. For each category, the tables show the number of newly employed persons, sex, average age, highest degree, instructional levels, and average salary.

Table 5 provides a similar summary of the characteristics of Special Education professional personnel who were employed in 1977-.
78. For this group, Table 6 shows the age distribution of persons

employed in each category of Special Education. About 2.3 of these persons were 35 years old or younger and 94% are 55 years or younger. It is clear that there is not a large number of Special Education professional personnel who are over 50 years old and approaching retirement.

Table 7 provides a comparison of the number of Special Education professional personnel who returned from the preceding year and the number of newly employed professional personnel for that year. As the total number of Special Education professionals increased, the total number of returning professionals has also increased. However, the percent of returned professionals in 1977-78 and in 1978-79 was 83% and the percent of newly employed professionals was 18% for both years. This suggests that a balance may have been reached, but two years is not sufficient time to build a great deal of confidence in that impression.

Attrition: Table 8 shows the pressive loss of Special Education personnel who were employed in 1973-74, but who did not return to Special Education assignments in the succeeding years. By 1978-79, almost half of the original 1973-74 staff had left their Special Education assignments. The proportion of the 1973-4 staff departing in successive years (.87, .77, .69, .62, .56) is very close to the annual attrition rates for 1974-75 and subsequent years. The reader should note that these proportions do not include the number of Special Education professional personnel who returned after an absence of one year or more.

Tables 8B and 8C indicate the annual attrition of Special Education professional personnel, but they also include those

persons who returned after an absence of one year of more. As shown in Table 8B, the accumulated percent return of 1973-74 professionals is ".63" rather than ".57" which was indicated in Table 8. This difference is due to the number of persons who left and returned. Line "c" shows that 3,026 of the 1973-4 left teaching, but 2,582 of the 6,889 professionals never returned during the 5-year period. Line "d" states that 201 of the 929 professionals who did not return to Special Education assignments in 1974-5, went instead to general education assignments in Michigan Public Schools.

The data in Table 9 indicate the progressive loss of Special Education professional personnel employed in 1973-74 from various assignments. Over a period of five years, there was a permanent or temporary loss of about 50% of the 1973-74 personnel in several categories, i.e., mentally handicapped (SA), orthopedically handicapped (SC), emotionally impaired (SE), physically impaired (SI), trainable (ST).

Since the category of learning disabled (SM) was not present in the 1973-74 Register, the 1975-76 school year was used as the base year when 651 teachers were employed with that assignment. The proportional loss of these teachers each year was very similar to the annual loss of teachers in the 1973-74 sample.

#### CERTIFICATION

Initial Certificates Recommended: Table 10 shows the number of initial provisional certificates issued in calendar years 1977 and 1978 for each Special Education category. As shown in the

ion (SB), emotionally impaired (SE), and learning disabled (SM).

All other areas reflected an increase in the number of endorsements.

Table 11 indicates the total number of endorsements in each Special Education category recommended by a Michigan College or University in 1978. After the institution name, the next columns show the total number of certificates recommended by the institution for Special Education fields. Table 12 shows the number of initial provisional certificates recommended by each institution in 1978 and the endorsements for newly certified personnel.

Each column with a Special Education code presents the number of endorsements recommended by each Michigan Institution. At the bottom of the column there are totals to indicate the number of endorsements recommended by all Michigan institutions and by all institutions in the United States, including Michigan. This provides a basis for estimating the number of endorsements attributed to institutions outside of Michigan.

Certificates Held By Current Teaching Staff: Table 13 identifies the types of certificates held by teachers employed in 197778 in Special Education assignments. Table 14 provides a similar summary of the types of certificates held by experienced teachers newly employed in 1978-79 for Special Education. All beginning teachers (zero years teaching experience) employed in 1978-79 for Special Education assignments had provisional teaching certificates.

Need for Special Education Teachers: The following remarks describe one model for estimating the number of Special Education professional personnel needed for a given year. Table 16 lists several elements which may be used in the model to estimate the need for professional personnel in Michigan public schools in the 1978-79 school year. As shown in Table 16:

- Col. A Special Education teachers employed 1977-8
- Col. B 1973 annual attrition for each category
- Col. C Available positions due to attrition
- Col. D Rate of creation of new positions
- Col. E New positions available
- Col. F Total positions available (C+E) for 1978-79.
- Col. G Estimated additional qualified substitute teachers needed for old positions (20% of Col. F)
- Col. H Estimated additional qualified substitutes needed for new positions (16% of Col. E)
- Col. I Total new Special Education teachers needed for 1978-9
- Col. J Total need for Special Education teachers including 10% surplus

Columns A through F illustrate the need for replacement of teachers who leave an existing teaching assignment or who are employed to fill new positions.

A second consideration in estimating the need for Special Education personnel, is to estimate the number of substitute teachers who are needed in order to provide a qualified Special Education teacher to work with handicapped pupils. There is a dearth of information to describe the number and qualifications of substitute teachers who work with Special Education pupils.

In general education, it is estimated that teacher absenteeism is about 8%. Some persons might argue that Special Education teachers are under greater stress than the typical teacher in a general education classroom; therefore, the absenteeism would be greater among Special Education teachers.

Table 15 lists the total number of teachers employed in several Special Education categories in 1978-9. It seems reasonable to assume that the typical substitute teacher would probably want to work only two or three days per week and perhaps less frequently. The economic incentives, e.g., daily pay, retirement and unemployment benefits, would persuade Special Education substitutes to seek the position of a full-time contract teacher if he/she wanted to work five days per week for the entire school year.

There is not a comprehensive report of the number of substitute teachers utilized in Michigan Public Schools. Column "C" of Table 15 provides an estimate of the number of substitutes needed for each Special Education category based upon an assumed 8% rate of absenteeism and two substitutes required for each absent teacher.

There is a commonly acknowledged shortage of qualified substitute teachers for Michigan Schools. Therefore, Column "D" in Table 15 specifies a 20% increase in the number of qualified substitutes needed for each Special Education category. Using the preceding rationale, Columns G and H in Table 16 indicate the number of qualified professionals needed to serve as substitute teachers for absent personnel in the different categories.

Finally, a third consideration is that it is necessary to produce more teachers than are required to ill the expected

vacancies created by annual attrition, new teaching positions, and the need for qualified substitute teachers for each category of Special Education. A previous study has established that as many as 33% of the newly certified teachers in Michigan will choose not to enter teaching even though there may be many teaching positions for which they are qualified.

Although 33% may be too large for Special Education, it is very probable that at least 20% of the newly endorsed personnel in Special Education will never become full-time teachers in Special Education classes in Michigan.

Moreover, an exact match between expected vacancies and the number of newly certified teachers would intensify the shortages of certain Special Education teaching personnel in several regions of the State. It is an empirical fact of life that a large number of newly certified teachers want teaching positions close to their current permanent residence. Family responsibilities and personal preferences make them unwilling to change permanent residences and go to where the teaching positions exist.

Furthermore, administrators have argued that a modest surplus of available teaching personnel provides them with an opportunity to be selective when they are hiring new teachers and attempting to build a high caliber teaching staff.

The preceding remarks are not intended to provide a rationale for the unrestrained recruiting and training of college students for teaching careers which do not exist. Teacher education

Gary R. Smith, "Estimating the Number of Newly Certified Teachers Who Do Not Enter Teaching In Michigan Public Schools," Wayne State University, Detroit; August, 1977, 23 p., ERIC Doc. ED 161838.

institutions have an important responsibility to inform students of the employment opportunities in various teaching fields when the students first inquire about admission to a teacher education program. Annual updates of the employment picture and career counseling should be provided to those students who choose to enter teaching and who are accepted into a teacher education program.

Column J in Table 16 provides another estimate of the total.

need for Special Education personnel in 8 categories. These totals simply represent a 10% surplus of personnel over the corresponding totals listed in Column I.

## Recommendations:

- 1. The accuracy of future studies of the supply and demand for Special Education personnel will be substantially improved by establishing a common coding system so that the data files collected by the Special Education Services and by the Teacher Certification & Professional Development Division of the Michigan Department of Education can be related.
- 2. There should be a statewide study to determine the extent of absenteeism among Special Education personnel, the qualifications of substitute teachers used in their classes, and an annual census of substitute teachers utilized in Special Education classes in Michigan public schools.

Interpretation: The social security numbers of 1974-5 personnel were compared to social security numbers of professional employees in 1973-74. Those not matched were defined as "newly employed." There were 432 newly employed teachers of mentally impaired in 1974-5 and 510 newly employed in 1975-6. This was an .18 increase.

Proportion:	(1.00)	(1.00)	(1.00)	(1,00)	
		(2.00)	(1.00).	(1.00)	(1.00)

Interpretation: A comparison of social security numbers was used to establish whether a teacher was newly employed or returning from the preceding year. There were 5,960 special education professional personnel employed in 1974-5 who were also employed in 1973-4. This 5,960 represents .777 of the special education staff of 7,672 employed in 1974-75. There were 1,712 cm 2,273 novely employed professional in 1974-75. There were 1,712 or .223 newly employed professional personnel. Col. C totals include persons who became supervisors of Special Education (AY).

TABLE 8 - LOSS OF SPECIAL EDUCATION PROFESSIONAL PERSONNEL OVER 5-YEAR PERIOD

1973-4 Teachers:	1973-4	1974-5	1975-6	1976-7	1977-8	1978-9
Total Present Proportion Returned	6,889 1.00	5,960 .87	5,275 .77	4,721	4,238	3,863
1974-5 Teachers:				•

	•						

Interpretation: This table includes those professionals who left teaching and returned subsequent year. In special education assignments in 1978-9 there were 4,307 or .63 of the 6,889 special education professionals employed in 1973-4. A cumulative total of 3,026 had left the schools permanently or for one year or more. Of the 3,026, there were 796 persons who were employed in general education assignments.

<sup>\*</sup>Apparent shortage of substitute teaching personnel indicates need for substantial number of qualified personnel who will accept substitute teaching positions

Interpretation: Of the total 2,985 teachers of mentally handicapped (SA) employed in 1977-78, a daily absentee rate of 8% indicates 239 teachers absent. An estimated need of 2 substitutes per absent teacher indicates 478 substitutes needed. Apparent shortage of substitutes implies a need for 20% increase in available substitutes.

\*Mentally Handicapped (SA) now includes trainable teachers (ST) and consultants for mentally handicapped (SU)

Interpretation: There were 3,712 teachers of mentally handicapped in 1977-8. The 1973-4 attrition factor of 16% was estimated to produce 594 available old positions while the new position rate of 3% produced an estimated 112 new positions. There is an estimated need for 121 additional qualified substitutes plus 12 more qualified substitutes to cover new positions. New professionals needed is 839. Column J provides for 10% surplus over minimal need and indicates total need of 923 teachers of mentally handicapped pupils in 1978.
